Comment 15 November 2019

Ongoing slowdown in central end markets requires adjustment of annual targets – structural investment case intact

Yesterday, Nynomic published preliminary Q3 figures and reduced its outlook for the current FY 2019 in view of a still restrained demand in important sales markets. Although the cautious sentiment looks set to continue in the short term given the current market uncertainties, we consider the structural investment to still be intact.

9M figures significantly lower due to project postponements: Whilst the group’s Q3 sales were up 8.1% to EUR 15.9m, 9M revenue came in at EUR 45.2m which is still some 11.4% below the previous year’s level. The investment reluctance in high-volume end markets such as the semiconductor and electronics industries has already been apparent in the first half of the year. Over the last weeks, this resulted in further order postponements into the next year on the part of some key customers (esp. from China), so there is not enough room left for catch-up effects in the remainder of the year.

EBIT declined significantly both in Q3 (EUR 1.1m; -53.4% yoy) and after 9M (EUR 4.7m; -46.6% yoy). In addition to lacking economies of scale due to the lower sales volume, unscheduled investments in selling activities and predominantly in the product development in order to seize strategic growth opportunities had a negative impact especially in Q3. We also believe that Spectral Engines is likely to still make slight losses given the delayed start-up of the Bosch project.

Double-digit growth largely visible in the next year: As a result of these developments, management now expects group sales of some EUR 62.0m (previously EUR 67.0-70.0m) and EBIT of some EUR 6.2m (previously EUR 8.0-10.5m). At the same time, the company anticipates revenue that is “clearly in excess” of EUR 70.0m in 2020 and thus a substantial increase in the next year, which would imply the strongest growth rate of the last 6 years.

Although we reduce our estimates in view of the existing uncertainties in some end markets, now expecting organic growth of some 5% for 2020 (previously 7%), a significant increase in revenue seems to be largely visible in the next year. The contributions from the acquired LemnaTec and Sensortherm alone are in the high single-digit millions (MONE: c. EUR 9m). Additionally, the company has signed fixed purchase agreements with its key customers that have to be fulfilled within a certain period, so a proportion of the projects that have been delayed recently is likely to become sales-effective in the next year.

Conclusion: Despite a rather mixed year, we believe the structural investment case is still intact. The acquisitions and the recently delayed projects imply a return to double-digit growth, whilst in the medium term Nynomic is expected to sustainably benefit from the increasing use of smart and miniaturised measurement technology and the interconnection in new sectors (Industry 4.0 / IoT). We therefore confirm our Buy recommendation but have reduced the price target to EUR 27.00 (previously EUR 31.00).

COMPANY BACKGROUND

The Nynomic AG was founded in 1995 under the name of m-u-t GmbH Meßgeräte für Medizin- und Umwelttechnik and is based in Wedel near Hamburg. The company's origins are in the system integration of spectroscopy in medical and biotechnology. Today, the group is the leading full-line supplier of non-contact optical measurement technology. Unlike the classical techniques, such a measurement process does not only analyse the pure geometry but also the properties of objects. For instance, it can measure attributes such as colour, temperature, density or chemical composition in a non-contact and non-destructive way. The company markets both independent brands and white label products. It has access to the most important sales markets through its eight internationally positioned subsidiaries, benefits from a local support of customers and a well-developed sales and logistics network.

As a system supplier of individual components as well as complete equipment, Nynomic attends to a wide range of OEMs in different end markets along the entire value chain. Thanks to the successfully implemented buy and build strategy of the past years, Nynomic can offer its diversified product portfolio to numerous fields of applications both in the B2B and the emerging B2C sector, e.g. around the smart home megatrend. Amongst others, measurement technology is used in medical technology, in the chemicals industry, pharmaceutical industry, agriculture, environmental technology, semiconductor industry as well as in a broad array of applications in the entire industrial sector. Some of the most important milestones in the company's history are shown below.

- 1995** Foundation of m-u-t GmbH with a focus on measurement devices for medical and environmental technology
- 2001** ISO 9001 and VDE certification
- 2007** Conversion into a stock corporation and listing on the Frankfurt Stock Exchange
- 2007** Shareholding in tec5 AG (51%), a supplier of spectroscopy solutions
- 2008** Acquisition of the majority stake in Avantes Holding B.V. (51%), a manufacturer of fibre optic spectroscopy devices
- 2011** Increase in the stake in tec5 AG by another 44% to 95%
- 2012** Restructuring of the business units
- 2014** Outsourcing of the operating business to the m-u-t GmbH
- 2015** Replacement of the Executive Board by Maik Müller (CEO) and Fabian Peters (CFO)
- 2016** Majority stake in APOS GmbH (55%), a spectroscopy supplier for the wood processing industry and complete acquisition of tec5 AG
- 2017** Complete acquisition of Avantes Holding B.V.
- 2017** Majority stake and integration of LayTec AG (95.6%), a market leader for process-integrated measurement technology and MEMS-based spectral sensors
- 2018** Capital increase by way of contribution in kind and acquisition of the remaining shares in LayTec AG
- 2018** Change of name to Nynomic AG
- 2018** Entry into the B2C market through the acquisition of Spectral Engines Oy (75%)
- 2018** First strategic order from the area of end devices for the B2C market from Bosch-Siemens-Hausgeräte GmbH
- 2019** Acquisition of LemnaTec GmbH, a specialist for plant phenotyping
- 2019** Entry into the market of infrared temperature measurement by the acquisition of Sensortherm GmbH

With its roughly 400 employees, Nynomic generated revenue of EUR 67.1m and EBIT of EUR 10.1m in FY 2018. This is a record result in both revenue and earnings for the third time in a row. In addition to continued growth in the core markets (Germany, Europe and North America), this can also be attributed to the subsidiaries and sales partners in the Asian region. The organigram below gives an overview of the group’s organisational structure.

Source: Company

Shareholdings

Nynomic accompanies its customers along the entire value chain and offers different degrees of vertical integration and individual product modifications via its subsidiaries. The Nynomic AG acts as a subordinate financial holding and fulfils strategic functions within the group. All shareholdings have the same technological focus and support the vertical integration.

- **Avantes Holding B.V.**, which was acquired in 2008, is the basis for optical measuring cells and spectrometers. The company which is specialised in the miniaturisation of spectroscopy devices and software solutions develops and produces spectrometers, light sources for UV/VIS/NIR, fibre-optics and accessories. In addition, the company adjusts equipment according to customer-specific requirements. The Avantes group has access to all important markets through its own subsidiaries, enabling the company to locally support its OEM customers. The products are used, for instance, in biotechnology, the chemical and food industries as well as in thin film analysis for the production of solar cells.
- The **tec5 AG** has been part of the Nynomic group since 2007 and manufactures high-quality products for the detector array spectroscopy of OEM components as well as drive electronics. The company also covers the next step of the value chain and combines individual parts from Avantes B.V. to create full systems, which are directly sold to OEM and industrial clients as a standard solution under the company’s own name. tec5 has also access to the most important end markets via its subsidiaries.
- Operating subsidiary **m-u-t GmbH** produces products for the permanent, non-contact and non-destructive optical measurement technology. Using its proprietary know-how, m-u-t GmbH transforms the products of other group companies into innovative applications. The resulting customised solutions are then produced, e.g. as series equipment, and sold into the market. The company has a broad product range which, amongst others, includes sensorics, laboratory automation, medical technology, and spectroscopy.
- **APOS GmbH** supplies Nynomic’s customers with spectroscopic measurement systems, specifically for the wood processing industry. APOS is the technology and know-how leader in this niche market and is focused on applications with a high scalability. The products are typically used in the wood products industry, in biomass power plants and other bulk material applications.

- The internationally active **LayTec AG** is the market-leading supplier of process-integrated measurement technology with a focus on laser and LED production. Since the company's acquisition in 2017, the company-specific solutions are also increasingly used in photovoltaic, surface coating and in the semiconductor industry. For instance, the products can be employed in the in-situ process control of LEDs and semiconductor lasers. They are also suited for the real-time analysis of manufacturing processes as optical in-line metrology in the solar cell industry. Another product from LayTec, a measurement system for VCSEL lasers (vertical cavity surface-emitting laser), is used for Face-ID technologies in smartphones.
- **Spectral Engines Oy** develops and produces extremely compact low-cost spectral sensors, which can be used both in industrial applications and in the consumer segment. By acquiring this company, Nynomic laid the foundation for its entry in the area of end devices for the B2C segment. The products of Spectral Engines can be used in mobile devices at a reasonable price and thus predominantly target applications in the fields of smart home, smart industry and smart agriculture. A quick and reliable measurement is guaranteed with the help of the patented MEMS interferometer, which is already used as a food scanner in smartphones. With the help of an app and the corresponding cloud-based software, data is synchronised in real-time and is consistently optimised by machine learning.
- **LemnaTec GmbH** is a specialist for hardware and software systems for digital plant phenotyping. The company's solutions enable a contact-free analysis of plants thanks to complex sensor technology helping to determine both essential growth and quality characteristics (e.g. size, shape and colour as characteristics for shoot and root growth) as well as physiological parameters (e.g. water and nutrient content or photosynthesis). These analyses provide fundamental indicators for the breeding and optimisation of seeds and crops in modern industrial agriculture. The areas of application span from agrochemistry, agronomy and plant research to practical breeding and include both small applications in the laboratory and large-scale installations for greenhouses and open fields.
- **Sensortherm GmbH** is a specialist in infrared measuring technology and offers numerous applications for non-contact, precise and quick temperature measurements. With an experience of more than 30 years the company is an industry-wide technology leader in this market. The pyrometers developed by Sensortherm are among the world's most efficient measuring devices of this kind thanks to their ability of a fully digital signal processing and signal output. Amongst others, pyrometers are used to control and regulate the process temperatures in laser systems. For this reason, they are of central importance for the steel industry, for instance, to pave the way for the best possible product quality by avoiding temperature deviations.

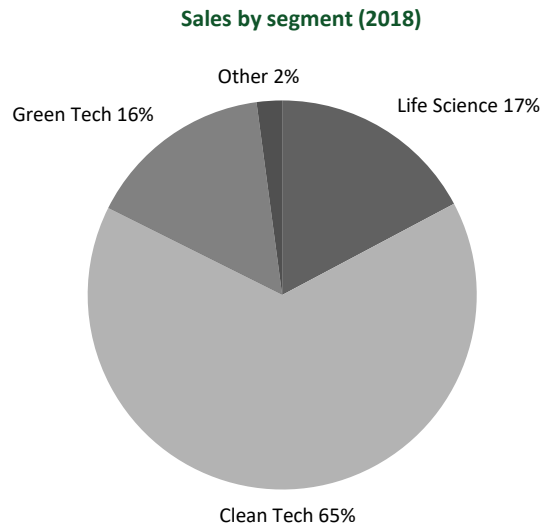

Segment analysis

Nynomic's operating business activities are divided in the Life Science, Green Tech and Clean Tech reporting segments.

Life Science (17% of total revenue in 2018): The products in this segment are mainly used in the pharma industry, in medical technology and biotechnology. The core products are optical sensors, spectroscopy systems and automation solutions for laboratories and research institutes, which can be used in a wide array of applications. Future potential, e.g. in research, is tapped by patent and licensing rights in analytical engineering.

Green Tech (16%): This segment develops and produces individual solutions for agriculture, specifically for applications in the area of intelligent farming. The increasingly industrialised and automated agricultural sector is perfectly aligned by efficiency-enhancing processes such as the sensor-based analysis of soils and crop, the automated application of fertilizer, and radio-controlled animal feed. Additionally, the use of spectroscopy sensors supports producers in fulfilling regulatory quality requirements. The use of solar modules also falls under this segment.

Clean Tech (65%): This segment comprises a broad range of solutions for the industry sector. The broad areas of application span from individual optical sensors to customer-specific end-to-end solutions. The target markets are the chemical industry, food applications and the semiconductor industry. The automated inspection of processes helps to make the wafer and display production more efficient and guarantees a higher quality standard.

Source: Company

Products

The group’s product solutions are all built on a spectral sensor technology platform. This measurement technology allows a non-destructive and non-contact analysis of product characteristics, as it measures the wavelength reflected by an object. These values can be specified in a connected database and the element can be clearly assigned. The procedure is universally applicable and can be easily integrated into the customers’ different process chains. Based on the relevant spectroscopy processes (UV/VIS/NIR/RAMAN/LIBS) the application solutions can be designed for a broad number of end markets. Thanks to Nynomic’s vertical integration the customers can choose between standard products and highly specific full systems, which increase the efficiency of production processes.

Nynomic also accompanies customers along the entire value chain in various end markets. The company has already gained significant experience in a multitude of industries and has a broad problem-solving expertise in the area of process-integrated online measurement technology. The end user is involved in the product development at a very early stage and benefits from Nynomic’s technology and know-how leadership. This leads to close customer relationships which often entail long-term contracts as well as exclusive supplier agreements.

Markets and sales

The branches and the sales network of Nynomic lead to a strong international distribution of sales. In addition to the production facilities, which are mainly located in Europe, the company has many subsidiaries and distribution facilities on other continents, supporting the local and direct customer service. In 2018, the group generated some 66% of sales in Europe. The remaining share is mainly generated in the USA, which accounted for some 26% of 2018 sales and is an important core market. The sales share in Europe is expected to increase further due to the full integration of the recently acquired Finnish Spectral Engines.

Experienced management

Maik Müller (CEO) has been appointed to the Executive Board of Nynomic AG in May 2015. He is responsible for Technology, Operations, and Research and Development. The graduate engineer (Dipl. Ingenieur) previously has been working in management positions for several years. In parallel, he was a member of the Executive Board of tec5 AG for many years, which today is a subsidiary of Nynomic. At that time, he contributed greatly to the establishment of the company. Maik Müller has many years of experience in management, especially in research and development as well as high-tech consulting. In 2018, he extended his contract prematurely until December 31, 2023.

Fabian Peters (CFO) has worked for the group since October 2013 and has been appointed to the Executive Board in 2015. The graduate tax consultant (Diplom-Finanzwirt) is responsible for Finance, Controlling, Organisation and Investor Relations. In parallel, he is Managing Director of m-u-t GmbH. Prior to joining the group, Fabian Peters was the CFO of the L&O group for many years, worked at Versatel AG in the field of finance and held several management positions in the insurance industry. In 2017, Fabian Peters’ contract was prematurely extended until December 31, 2022.

Shareholder structure

As a result of the last capital increase in February 2018, which was used to finance the acquisition of LayTec AG, the number of shares increased by 285,000 units. The share capital now amounts to EUR 5,070,000, divided into the same number of shares at a value of EUR 1.00 each. All the shares are bearer shares with voting rights. Roughly 25% of the share capital is held by members of the executive board and the supervisory board. The remaining shares are free float.

DISCLAIMER

This document does not represent any offer or invitation to buy or sell any kind of securities or financial instruments. The document serves for information purposes only. This document only contains a non-binding opinion on the investment instruments concerned and non-binding judgments on market conditions at the time of publication. Due to its content, which serves for general information purposes only, this document may not replace personal, investor- or issue-specific advice and does also not provide basic information required for an investment decision that are formulated and expressed in other sources, especially in properly authorised prospectuses.

All data, statements and conclusions drawn in this document are based on sources believed to be reliable but we do not guarantee their correctness or their completeness. The expressed statements reflect the personal judgement of the author at a certain point in time. These judgements may be changed at any time and without prior announcement. No liability for direct and indirect damages is assumed by either the analyst or the institution employing the analyst. This confidential report is made available to a limited audience only. This publication and its contents may only be disseminated or distributed to third parties following the prior consent of Montega. All capital market rules and regulations governing the compilation, content, and distribution of research in force in the different national legal systems apply and are to be complied with by both suppliers and recipients.

Distribution within the United Kingdom: this document is allotted exclusively to persons who are authorized or appointed in the sense of the Financial Services Act of 1986 or on any valid resolution on the basis of this act. Recipients also include persons described in para 11(3) of the Financial Act 1986 (Investments Advertisements) (Exemptions) Order 1996 (in each currently valid amendment). It is not intended to remit information directly or indirectly to any other groups or recipients. It is not allowed to transmit, distribute, or to make this document or a copy thereof available to persons within the United States of America, Canada, and Japan or to their overseas territories.

Declaration according to Section 34b WpHG and FinAnV on possible conflicts of interest (as per 15 November, 2019):

Montega AG has made an agreement with this company about the preparation of a financial analysis. The research report has been made available to the company prior to its publication / dissemination. Thereafter, only factual changes have been made to the report. A company affiliated with Montega AG may hold an interest in the issuer's share capital.

Prices of financial instruments mentioned in this analysis are closing prices of the publishing date (respectively the previous day) if not explicitly mentioned otherwise.

Declaration according to Section 34b WpHG and FinAnV on additional information (as per 15 November, 2019):

Any updating of this publication will be made in the case of events that Montega considers to be possibly relevant to the stocks' price performance. The end of regular comments on events in context with the issuer (coverage) will be announced beforehand.

Reference pursuant to MiFID II (as of 15 November, 2019):

This publication was prepared on the basis of a contract between Montega AG and the issuer and will be paid by the issuer. This document has been widely published and Montega AG makes it simultaneously available for all interested parties. Its receipt therefore is considered a permissible minor non-monetary benefit in the sense of section 64 Paragraph 7 Sentence 2 No. 1 and 2 of the German Securities Trading Act (WpHG).

Fundamental basics and principles of the evaluative judgements contained in this document:

Assessments and valuations leading to ratings and judgements given by Montega AG are generally based on acknowledged and broadly approved methods of analysis i.e. a DCF model, a peer group comparison, or sum-of-the-parts model.

Our ratings:

Buy: The analysts at Montega AG believe the share price will rise during the next twelve months.

Hold: Upside/downside potential limited. No immediate catalyst visible.

Sell: The analysts at Montega AG believe the share price will fall during the next twelve months.
