Comment 25 March 2022

Increased guidance for FY 21 significantly exceeded – outlook on 2022 appears conservative as usual

Yesterday, Nynomic has released preliminary results for FY 2021, exceeding the outlook that had already been raised twice. Based on an order book at record levels at the end of the year and indications about progress on several high-margin projects during the company’s earnings call we remain optimistic that the group will continue to grow at two-digit rates in this year as well.

Two-digit top line increase, another margin expansion Consolidated sales grew to approx. EUR 105.2m (+33.9% yoy) in FY 21 which is well above our estimate (EUR 102.0m) and the company’s guidance of some EUR 100.0m, which had been raised a second time in November last year. EBIT increased disproportionately by +63.3% to approx. EUR 13.0m, as the company had announced, leading to a margin in excess of 12% (+230bp yoy) at group level. Given that the procurement prices of numerous components have increased significantly worldwide, we regard this as further evidence of the scalability of Nynomic’s business model (esp. solutions around the miniaturized sensors of Spectral Engines). It is also proof of the group’s efficient supply chain management and the solid pricing power of Nynomic thanks to continuing strong demand for innovative spectroscopy-based solutions across all industries.

2022 should also be characterized by strong growth and increase in profitability: Irrespective of the significantly higher base, Nynomic is likely to continue on its growth path in FY 22. Additional contributions to sales and margins which in part are well above the current levels should stem from 1) the advances of the project with Novartis in the area of “fake medicine” including expected orders from other pharmaceutical companies in this area in the current year, 2) the positive international roll-out (according to management) of the “TactiScan” handheld for the detection of drugs, and 3) growing demand for the “Purpl PRO” cannabis measuring device. Additionally, the initial full-year consolidation of Image Engineering and MGG, which were acquired in FY 21, should result in inorganic sales effects (MONE: approx. EUR +5-6m vs. FY 21), so that the revenue target of > EUR 110m communicated for 2022 implies marginal organic growth at best. Having in mind an order book at record levels of EUR 73.5m (PY: EUR 72.6m), we consider this conservative, as is usual for the company. We currently anticipate organic growth of roughly 7% yoy, which is above the lower level projected by management.

It is also realistic to believe that the EBIT margin will exceed the level of 13-14% as indicated by management during the earnings call. Nonetheless, we slightly reduce our former estimate for preventive reasons in view of the ongoing upheaval on the global procurement markets.

Conclusion: The 2021 figures and the outlook for 2022 have again backed our view of the investment case. We confirm rating and price target.

COMPANY BACKGROUND

The Nynomic AG was founded in 1995 under the name of m-u-t GmbH Meßgeräte für Medizin- und Umwelttechnik and is based in Wedel near Hamburg. The company's origins are in the system integration of spectroscopy in medical and biotechnology. Today, the group is the leading full-line supplier of non-contact optical measurement technology. Unlike the classical techniques, such a measurement process does not only analyse the pure geometry but also the properties of objects. For instance, it can measure attributes such as colour, temperature, density or chemical composition in a non-contact and non-destructive way. The company markets both independent brands and white label products. It has access to the most important sales markets through its ten internationally positioned subsidiaries, benefits from a local support of customers and a well-developed sales and logistics network.

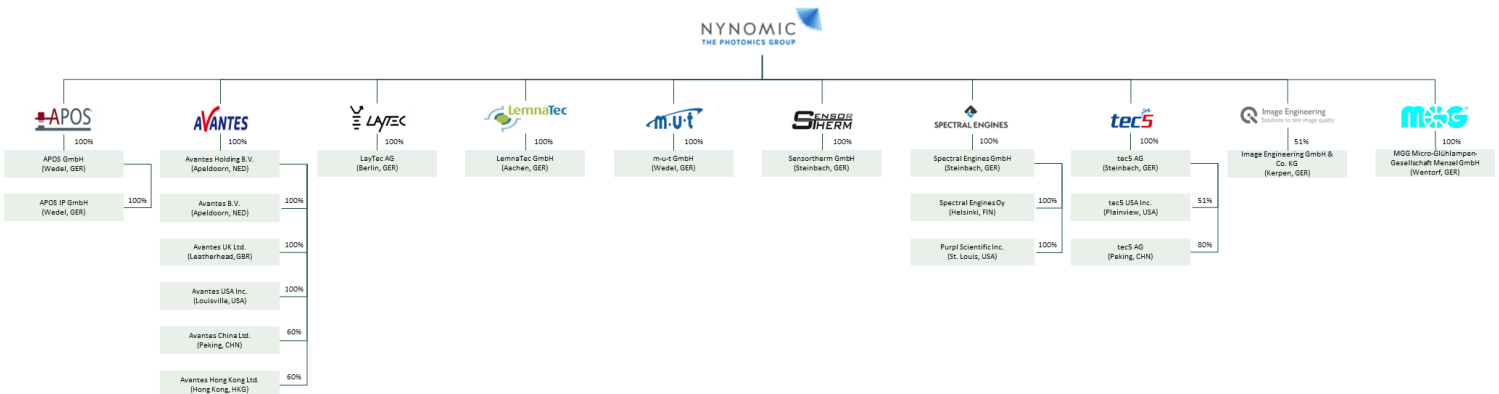

As a system supplier of individual components as well as complete equipment, Nynomic attends to a wide range of OEMs in different end markets along the entire value chain. Thanks to the successfully implemented buy and build strategy of the past years, Nynomic can offer its diversified product portfolio to numerous fields of applications both in the B2B and the emerging B2C sector, e.g. around the smart home megatrend. Amongst others, measurement technology is used in medical technology, in the chemicals industry, pharmaceutical industry, agriculture, environmental technology, semiconductor industry as well as in a broad array of applications in the entire industrial sector. Some of the most important milestones in the company's history are shown below.

- 1995** Foundation of m-u-t GmbH with a focus on measurement devices for medical and environmental technology
- 2007** Conversion into a stock corporation and listing on the Frankfurt Stock Exchange
- 2007** Shareholding in tec5 AG (51%), a supplier of spectroscopy solutions
- 2008** Acquisition of the majority stake in Avantes Holding B.V. (51%), a manufacturer of fibre optic spectroscopy devices
- 2011** Increase in the stake in tec5 AG by another 44% to 95%
- 2012** Restructuring of the business units
- 2014** Outsourcing of the operating business to the m-u-t GmbH
- 2015** Replacement of the Executive Board by Maik Müller (CEO) and Fabian Peters (CFO)
- 2016** Majority stake in APOS GmbH (55%), a spectroscopy supplier for the wood processing industry and complete acquisition of tec5 AG
- 2017** Complete acquisition of Avantes Holding B.V. as well as majority stake and integration of LayTec AG (95.6%), a market leader for process-integrated measurement technology and MEMS-based spectral sensors
- 2018** Capital increase by way of contribution in kind and acquisition of the remaining shares in LayTec AG
- 2018** Change of name to Nynomic AG
- 2018** Entry into the B2C market through the acquisition of Spectral Engines Oy (75%) and first strategic order from the area of end devices for the B2C market from Bosch-Siemens-Hausgeräte GmbH
- 2019** Acquisition of LemnaTec GmbH, a specialist for plant phenotyping
- 2019** Entry into the market of infrared temperature measurement by the acquisition of Sensortherm GmbH
- 2020** Acquisition of the remaining stake in Spectral Engines Oy and integration into Spectral Engines GmbH

2021 Majority stake in Image Engineering GmbH & Co. KG (51%), a manufacturer for image quality test equipment

2021 Acquisition of MGG Micro-Glühlampen-Gesellschaft Menzel GmbH, a specialist for micro light bulbs

With its roughly 499 employees, Nynomic generated revenue of EUR 105.2m and EBIT of EUR 13.0m in FY 2021. The organigram below gives an overview of the group’s organisational structure.

Source: Company

Shareholdings

Nynomic accompanies its customers along the entire value chain and offers different degrees of vertical integration and individual product modifications via its subsidiaries. The Nynomic AG acts as a subordinate financial holding and fulfils strategic functions within the group. All shareholdings have the same technological focus and support the vertical integration.

- **Avantes Holding B.V.**, which was acquired in 2008, is the basis for optical measuring cells and spectrometers. The company which is specialised in the miniaturisation of spectroscopy devices and software solutions develops and produces spectrometers, light sources for UV/VIS/NIR, fibre-optics and accessories. In addition, the company adjusts equipment according to customer-specific requirements. The Avantes group has access to all important markets through its own subsidiaries, enabling the company to locally support its OEM customers. The products are used, for instance, in biotechnology, the chemical and food industries as well as in thin film analysis for the production of solar cells.
- The **tec5 AG** has been part of the Nynomic group since 2007 and manufactures high-quality products for the detector array spectroscopy of OEM components as well as drive electronics. The company also covers the next step of the value chain and combines individual parts from Avantes B.V. to create full systems, which are directly sold to OEM and industrial clients as a standard solution under the company’s own name. tec5 has also access to the most important end markets via its subsidiaries.
- Operating subsidiary **m-u-t GmbH** produces products for the permanent, non-contact and non-destructive optical measurement technology. Using its proprietary know-how, m-u-t GmbH transforms the products of other group companies into innovative applications. The resulting customised solutions are then produced, e.g. as series equipment, and sold into the market. The company has a broad product range which, amongst others, includes sensorics, laboratory automation, medical technology, and spectroscopy.
- **APOS GmbH** supplies Nynomic’s customers with spectroscopic measurement systems, specifically for the wood processing industry. APOS is the technology and know-how leader in this niche market and is focused on applications with a high

scalability. The products are typically used in the wood products industry, in biomass power plants and other bulk material applications.

- The internationally active **LayTec AG** is the market-leading supplier of process-integrated measurement technology with a focus on laser and LED production. Since the company's acquisition in 2017, the company-specific solutions are also increasingly used in photovoltaic, surface coating and in the semiconductor industry. For instance, the products can be employed in the in-situ process control of LEDs and semiconductor lasers. They are also suited for the real-time analysis of manufacturing processes as optical in-line metrology in the solar cell industry. Another product from LayTec, a measurement system for VCSEL lasers (vertical cavity surface-emitting laser), is used for Face-ID technologies in smartphones.
- **Spectral Engines GmbH** (initially: Spectral Engines Oy) develops and produces extremely compact low-cost spectral sensors, which can be used both in industrial applications and in the consumer segment. By acquiring this company, Nynomic laid the foundation for its entry in the area of end devices for the B2C segment. The products of Spectral Engines can be used in mobile devices at a reasonable price and thus predominantly target applications in the fields of smart home, smart industry and smart agriculture. A quick and reliable measurement is guaranteed with the help of the patented MEMS interferometer, which is already used as a food scanner in smartphones. With the help of an app and the corresponding cloud-based software, data is synchronised in real-time and is consistently optimised by machine learning. Following the takeover of a majority stake (75%) in May 2018, Nynomic acquired the remaining stake of the company in May 2020. In the same year, parts of the operating business were relocated from Finland to Germany as Spectral Engines Oy was integrated into Spectral Engines GmbH.
- **LemnaTec GmbH** is a specialist for hardware and software systems for digital plant phenotyping. The company's solutions enable a contact-free analysis of plants thanks to complex sensor technology helping to determine both essential growth and quality characteristics (e.g. size, shape and colour as characteristics for shoot and root growth) as well as physiological parameters (e.g. water and nutrient content or photosynthesis). These analyses provide fundamental indicators for the breeding and optimisation of seeds and crops in modern industrial agriculture. The areas of application span from agrochemistry, agronomy and plant research to practical breeding and include both small applications in the laboratory and large-scale installations for greenhouses and open fields.
- **Sensortherm GmbH** is a specialist in infrared measuring technology and offers numerous applications for non-contact, precise and quick temperature measurements. With an experience of more than 30 years the company is an industry-wide technology leader in this market. The pyrometers developed by Sensortherm are among the world's most efficient measuring devices of this kind thanks to their ability of a fully digital signal processing and signal output. Amongst others, pyrometers are used to control and regulate the process temperatures in laser systems. For this reason, they are of central importance for the steel industry, for instance, to pave the way for the best possible product quality by avoiding temperature deviations.
- **Image Engineering GmbH & Co. KG** has been part of the Nynomic group since 2021. The company's test charts, analysis software, measurement and illumination devices provide clients with the means to test and evaluate the image quality of their cameras more accurately. This is of great importance for applications with high requirements to image quality, for instance cameras for autonomous driving. The company's customers come from different (product) sectors such as photography, mobile phone, automotive and ADAS systems, security, broadcast, machine vision, medical/endoscopy, and archiving.

- **MGG Micro-Glühlampen-Gesellschaft Menzel GmbH** is a specialist for micro light bulbs. The company offers more than 5,000 different types of lamps as standardised catalogue goods. Moreover, the company also develops and produces light projection, lens-ended and special lamps according to customers' need. In addition to infrared technology, electrical engineering, aviation and aerospace, medical engineering, telecommunications, machine tooling and defence electronics, the most frequent applications also include optical measuring technology and spectroscopy.

Segment analysis

Nynomic's operating business activities are divided in the Life Science, Green Tech and Clean Tech reporting segments.

Life Science (23% of total revenue in 2021): The products in this segment are mainly used in the pharma industry, in medical technology and biotechnology. The core products are optical sensors, spectroscopy systems and automation solutions for laboratories and research institutes, which can be used in a wide array of applications. Future potential, e.g. in research, is tapped by patent and licensing rights in analytical engineering.

Green Tech (16%): This segment develops and produces individual solutions for agriculture, specifically for applications in the area of intelligent farming. The increasingly industrialised and automated agricultural sector is perfectly aligned by efficiency-enhancing processes such as the sensor-based analysis of soils and crop, the automated application of fertilizer, and radio-controlled animal feed. Additionally, the use of spectroscopy sensors supports producers in fulfilling regulatory quality requirements. The use of solar modules also falls under this segment.

Clean Tech (61%): This segment comprises a broad range of solutions for the industry sector. The broad areas of application span from individual optical sensors to customer-specific end-to-end solutions. The target markets are the chemical industry, food applications and the semiconductor industry. The automated inspection of processes helps to make the wafer and display production more efficient and guarantees a higher quality standard.

Sales by segment (2021)

Source: Company

Products

The group's product solutions are all built on a spectral sensor technology platform. This measurement technology allows a non-destructive and non-contact analysis of product characteristics, as it measures the wavelength reflected by an object. These values can be specified in a connected database and the element can be clearly assigned. The procedure

is universally applicable and can be easily integrated into the customers’ different process chains. Based on the relevant spectroscopy processes (UV/VIS/NIR/RAMAN/LIBS) the application solutions can be designed for a broad number of end markets. Thanks to Nynomic’s vertical integration the customers can choose between standard products and highly specific full systems, which increase the efficiency of production processes.

Nynomic also accompanies customers along the entire value chain in various end markets. The company has already gained significant experience in a multitude of industries and has a broad problem-solving expertise in the area of process-integrated online measurement technology. The end user is involved in the product development at a very early stage and benefits from Nynomic’s technology and know-how leadership. This leads to close customer relationships which often entail long-term contracts as well as exclusive supplier agreements.

Markets and sales

The branches and the sales network of Nynomic lead to a strong international distribution of sales. In addition to the production facilities, which are mainly located in Europe, the company has many subsidiaries and distribution facilities on other continents, supporting the local and direct customer service. In 2021, the group generated some 63% of sales in Europe. The remaining share is mainly generated in the USA, which accounted for some 27% of 2021 sales and is an important core market.

Experienced management

Maik Müller (CEO) has been appointed to the Executive Board of Nynomic AG in May 2015. He is responsible for Technology, Operations, and Research and Development. The graduate engineer (Dipl. Ingenieur) previously has been working in management positions for several years. In parallel, he was a member of the Executive Board of tec5 AG for many years, which today is a subsidiary of Nynomic. At that time, he contributed greatly to the establishment of the company. Maik Müller has many years of experience in management, especially in research and development as well as high-tech consulting. In 2018, he extended his contract prematurely until December 31, 2023.

Fabian Peters (CFO) has worked for the group since October 2013 and has been appointed to the Executive Board in 2015. The graduate tax consultant (Diplom-Finanzwirt) is responsible for Finance, Controlling, Organisation and Investor Relations. In parallel, he is Managing Director of m-u-t GmbH. Prior to joining the group, Fabian Peters was the CFO of the L&O group for many years, worked at Versatel AG in the field of finance and held several management positions in the insurance industry. In 2021, Fabian Peters’ contract was prematurely extended until December 31, 2026.

Shareholder structure

As a result of the last cash capital increases in June and November 2020, the number of shares increased by 507,000 units in total. A further increase of 115,000 shares was caused by the stock option plan of the company in 2020 as management and supervisory board exercised 100,000 units in total. Moreover, 116,700 new shares were issued by means of a capital increase against contribution in kind for the acquisition of MGG Micro-Glühlampen-Gesellschaft Menzel GmbH in October 2021. The share capital now amounts to EUR 5,901,200, divided into the same number of shares at a value of EUR 1.00 each. All the shares are bearer shares with voting rights. Almost 24% of the share capital is held by members of the executive board and the supervisory board. With a stake of above 5%, Paladin Asset Management has been acting as a strategic anchor shareholder since June 2020. The remaining shares are free float.

DISCLAIMER

This document does not represent any offer or invitation to buy or sell any kind of securities or financial instruments. The document serves for information purposes only. This document only contains a non-binding opinion on the investment instruments concerned and non-binding judgments on market conditions at the time of publication. Due to its content, which serves for general information purposes only, this document may not replace personal, investor- or issue-specific advice and does also not provide basic information required for an investment decision that are formulated and expressed in other sources, especially in properly authorised prospectuses. All data, statements and conclusions drawn in this document are based on sources believed to be reliable but we do not guarantee their correctness or their completeness. The expressed statements reflect the personal judgement of the author at a certain point in time. These judgements may be changed at any time and without prior announcement. No liability for direct and indirect damages is assumed by either the analyst or the institution employing the analyst. This confidential report is made available to a limited audience only. This publication and its contents may only be disseminated or distributed to third parties following the prior consent of Montega. All capital market rules and regulations governing the compilation, content, and distribution of research in force in the different national legal systems apply and are to be complied with by both suppliers and recipients. Distribution within the United Kingdom: this document is allotted exclusively to persons who are authorized or appointed in the sense of the Financial Services Act of 1986 or on any valid resolution on the basis of this act. Recipients also include persons described in para 11(3) of the Financial Act 1986 (Investments Advertisements) (Exemptions) Order 1996 (in each currently valid amendment). It is not intended to remit information directly or indirectly to any other groups or recipients. It is not allowed to transmit, distribute, or to make this document or a copy thereof available to persons within the United States of America, Canada, and Japan or to their overseas territories.

Declaration according to Section 85 of the German Securities Trading Act (WpHG) and Art. 20 Regulation (EU) No. 596/2014 in conjunction with Commission Delegated Regulation (Delegierte Verordnung) 2016/958 (as of 25 March, 2022): Montega has made an agreement with this company about the preparation of a financial analysis. The research report has been made available to the company prior to its publication / dissemination. Thereafter, only factual changes have been made to the report. Montega AG and/or its affiliates have been bound to an agreement about investment banking services for this company during the past 12 months or, during that time, received remuneration for such services. A company affiliated with Montega AG may hold an interest in the issuer's share capital.

Prices of financial instruments mentioned in this analysis are closing prices of the publishing date (respectively the previous day) if not explicitly mentioned otherwise. Any updating of this publication will be made in the case of events that Montega considers to be possibly relevant to the stocks' price performance. The end of regular comments on events in context with the issuer (coverage) will be announced beforehand.

Sources of information: The main sources of information for the preparation of this financial analysis are publications of the issuer as well as publicly available information of national and international media, which Montega regards as reliable. There have also been discussions with members of the management team or the investor relations division of the company concerned when preparing this analysis.

Reference pursuant to MiFID II (as of 25 March, 2022): This publication was prepared on the basis of a contract between Montega AG and the issuer and will be paid by the issuer. This document has been widely published and Montega AG makes it simultaneously available for all interested parties. Its receipt therefore is considered a permissible minor non-monetary benefit in the sense of section 64 Paragraph 7 Sentence 2 No. 1 and 2 of the German Securities Trading Act (WpHG).

Fundamental basics and principles of the evaluative judgements contained in this document: Assessments and valuations leading to ratings and judgements given by Montega AG are generally based on acknowledged and broadly approved methods of analysis i.e. a DCF model, a peer group comparison, or sum-of-the-parts model.

Our ratings:

Buy: The analysts at Montega AG believe the share price will rise during the next twelve months.

Hold: Upside/downside potential limited. No immediate catalyst visible.

Sell: The analysts at Montega AG believe the share price will fall during the next twelve months.
